

Fig 1: Trivago

Fig 2: priceline

Fig 3: onefinestay

Upon reviewing the usability test feedback for Priceline, Trivago, and Onefinestay, it's evident that each platform has its own set of strengths and weaknesses, influencing the overall user experience.

Starting with Priceline, users appreciated the platform's straightforward navigation and the convenience of being able to select multiple hotels for different locations simultaneously. This feature proved to be particularly useful for those planning multi-city trips or wanting to compare accommodations across various destinations. However, participants encountered challenges when attempting to access special deals and offers directly on the website. Instead, they found that such promotions were only available through the app, which posed an inconvenience for those primarily using the website. Additionally, the absence of user reviews for properties was noted as a drawback, as these reviews play a crucial role in helping users make informed decisions about their accommodations.

Moving on to Trivago, users praised its user-friendly interface and the ability to compare results from multiple websites, providing a comprehensive overview of available options. This feature was particularly appreciated as it allowed users to make more informed choices based on pricing and amenities. However, participants reported confusion when trying to locate special deals and offers, as these were not prominently displayed on the homepage. This led to a neutral satisfaction level with the overall usability of the platform. Additionally, while Trivago does provide user reviews for properties, participants noted that it lacked a dedicated page for browsing reviews, making it less intuitive to access this information.

Finally, Onefinestay garnered positive feedback for its clear navigation and easy access to special offers, making it simple for users to explore available deals in various cities. The platform's design and layout were praised for their simplicity and efficiency, allowing users to quickly find the information they needed. However, like Priceline and Trivago, Onefinestay also lacked user reviews for properties, which users identified as a limitation. Additionally, participants noted the difficulty in finding hotels offering stays for less than three days, which could potentially limit options for those planning shorter trips.

In summary, despite the absence of user reviews, Onefinestay emerged as the preferred choice among participants due to its intuitive navigation, easy access to special offers, and overall user-friendly design. However, all three platforms have room for improvement, particularly in terms of providing access to user reviews and making special deals more readily available to users browsing the website.
